

Is there treatment for hepatitis B?

Yes, hepatitis B treatment is very effective but it is not a cure. Not all people with hepatitis B need treatment. However, **all people with chronic hepatitis B should have regular check-ups** (every 6 or 12 months and sometimes more often) **with their doctor for the rest of their life.** This is the best way to prevent liver cirrhosis and liver cancer caused by chronic hepatitis B.

How can people protect themselves from hepatitis B?

The **hepatitis B vaccine** is the best way to prevent people from getting hepatitis B.

If you don't know your status, it is very important for you to see your doctor to get a hepatitis B test as soon as possible.

Please contact us at health@eccq.com.au or download a copy of the **B Healthy** Booklet and **Let's Talk About It** booklet from the website for further information. You can also ask us to send you hard copies for free.
